Art Unit: 2185

1. Claims 5, 22, 85 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 5 line 1, it appears "art" should be "act".

In claim 22 line 2, "and" should be "an".

In claim 85 line 1, it appears this claim should be dependent on claim 84, not on claim 81.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 84-87 are rejected under 35 U.S.C. 103(a) as being unpatentable over Doblar et al (6,338,144).

This reference teaches a memory module (Fig. 1 element 18) comprising a plurality of memory devices (elements 20a - 20c) and a clock regeneration circuit (Fig. 2 element 26a) for providing regenerated clock signals to the memory devices. See column 2 lines 5-33. Although the reference

Art Unit: 2185

does not say the regenerated clock signals are specific to a data write clock line, it is within the skill of the art to apply the regenerated clock signals to the data write clock line since the reference does mention the providing of signals for storing data in the memory (column 4 lines 37-45).

Although a register for receiving command and address signals is not specifically taught, it is known in the art that the memory controller (Fig. 1 element 14) would provide this feature for accessing memory. Data read clock lines are obviously also provided (column 4 lines 32-37). It is within the skill of the art to provide for different frequency levels.

4. Claims 1-4, 6-21, 23-83, 88 are allowed.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas Heckler whose telephone number is 703-305-9666.
